PROFILE

First Class Computer Science graduate (University of Kent) with a year-long placement at Mattel EMEA, spanning AI rollout, data governance, and e-commerce infrastructure. I enjoy working across the full lifecycle of a data or software system — from ingesting and modelling data through to building and deploying the services that run on it. Currently building an ML document-classification service in Python, while preparing for the AWS Solutions Architect – Associate certification.

SKILLS

Languages: Python (pandas, scikit-learn, pytest), JavaScript (React, Next.js, Liquid), SQL (MySQL), HTML/CSS, Java, PHP
Tools & Platforms: Git/GitHub, AWS (studying – Solutions Architect Associate), Kubernetes (KWOK), Shopify, Jira
Practices: Agile/Scrum sprint delivery, data governance & documentation, code review, QA collaboration, stakeholder communication

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate — in progress, expected autumn 2026

WORK EXPERIENCE

Software & Digital IT Intern | Mattel

Jul 2024 – Jul 2025

- Standardised MattelPaedia, Mattel's internal business glossary, by mapping and resolving terminology overlaps in Excel, with structured definitions uploaded into Collibra to support scalable, reliable data governance.
- Developed and maintained Mattel Creations' UK and DE e-commerce storefronts using Liquid, JavaScript, HTML and CSS — building custom APIs and integrating Klaviyo for automated email marketing and order communications.
- Ensured data integrity for a \$3.5M+ Hot Wheels Overdrive subscription service by validating backend JSON logs and Shopify distribution signals, supporting consistently smooth bi-weekly product drops with minimal fulfilment issues.
- Stepped in to solo-deliver Mattel's EMEA Town Hall presentation on MattelGPT after a co-presenter fell ill on the day — introduced by Mattel's EMEA lead — driving adoption of the internal AI platform across regional departments.

Software Engineering Intern | Linnworks

Summer 2021

- Delivered full-stack updates to a B2B SaaS platform in JavaScript/React within two-week Agile sprints — code reviews, testing and API documentation to support production-grade quality.

TECHNICAL PROJECTS

Insurance Document Classifier | Python, pandas, scikit-learn

- Developing a modular ML pipeline to classify insurance documents by type, with automated testing via pytest and a structured, version-controlled Python package; extending toward OCR ingestion and containerised AWS deployment.

KubeBench — Kubernetes Benchmarking Tool | Python, Kubernetes (KWOK) — Final Year Dissertation

- Benchmarked Kubernetes autoscaling algorithms using KWOK as a cluster simulator and Python as orchestrator, isolating cost and time-to-scale trade-offs across BPMN workflows to inform scaling strategy.

Freelance — Trade Business Website | React, Next.js

- Built and deployed a React/Next.js website for a plumbing and boiler engineering client, with continuous deployment to Vercel via Git push/pull.
- Implemented on-page SEO (metadata, semantic structure, page speed) to improve local search visibility for the client's trade services.

EDUCATION

BSc Computer Science — First Class Honours (78% Avg) | University of Kent

2022 – 2026

- Modules include Machine Learning Algorithms, NLP, Deep Learning; Foundations of Computing I (90%), Algorithms, Correctness & Efficiency (88%), Further OOP (87%), Functional Programming (81%).

A-Levels: Computer Science (B), Economics (B), Mathematics (C) | Bishop Ramsey CofE 2020 – 2022
